FAQ Title: 4WRLE pilot replacement

Category: Proportional and Servo Valves
Sub-Category: Proportional and Servo Valves

Question:
Can I replace the 4WRPEH 6 pilot valve on a 4WRLE pilot-operated valve with any available 4WRPEH 6 singular component material numbers?

Answer:
Many 4WRPEH 6 valves are available for use as a singular component, or used as “stand alone” valves. However, we do NOT recommend field replacement of pilot valves on 4WRLE’s. The 4WRPEH 6 valve will not be calibrated for use on the complete 4WRLE. It is recommended to replace the complete 4WRLE or have it repaired in our Service Dept. In either case, the pilot will then be calibrated to the corresponding main-stage during test. The nameplate with part # and/or model code for the complete 4WRLE can be found on the side of the main stage of the valve.
