STANDARD PUMP — The SV pump is a pressure compensated vane pump and is available in four basic displacements: one, two, four and eight cubic inches. This bulletin covers the model SV-40 (four cubic inch displacement) and a variation of it which is dimensionally the same.

TW INVANE PUMP — The TV-40 (TW INVANE) pump is a standard pump with internal changes which allow it to operate on either high water content fluids (HWCF) or petroleum fluids. It provides an equivalent life on HWCF with only a slight reduction in volumetric and overall efficiency when compared to operation with petroleum oil at the same pressure and rpm.

ALL TWINVANE PUMPS AND SPARE PARTS ARE NO LONGER AVAILABLE
Standard Pump

**PRESSURE RATING** -
SV-40 – 2000 psi (140 bar)

**PRESSURE COMPENSATING RANGE** -
SV-40 – 250-2000 psi (17-138 bar)

**FLOW AT 1800 rpm** -
SV-40 – 30 gpm (136/min) at 1900 psi

**THEORETICAL DISPLACEMENT** -
SV-40 – 4 in³/rev (65.6 ml/rev)

**MAXIMUM INLET VACUUM AT SEA LEVEL** -
6 in. Hg (152 mm Hg)  
3 in. Hg (76 mm Hg) with fluids containing water

**MAXIMUM CASE PRESSURE** -
10 psi (0.7 bar)  
Case drain line should be full intended size (not reduced down). Case pressure spikes can be minimized by using as straight and direct a path to tank as possible. Other drain lines should not be connected to the pump drain line. Always terminate the drain line below the fluid level in the reservoir. Failure to do so will result in loss of pump prime approximately 30 minutes after it is shut down and possible introduction of air into the circuit. Case drain line should be routed to the opposite side of baffle in relation to suction line.

**CASE DRAIN FLOW** -
The values listed below are the average flows which occur only when the pump is compensating. When the pump is not compensating, the values are much lower.

</tbody>
</table>

**DRIVE SPEED RANGE** -
750-1800 rpm (Consult factory Applications Dept. for higher speeds)

**MOUNTING** -
SAE C 2-Bolt Flange, side or rear ported.

**ROTATION** -
Right hand and left hand rotation is available. Rotation is always determined when viewing the shaft end.

**SEALS** -
(Buna N seals are no longer available. Viton seals are the new standard) Buna N seals are compatible with petroleum oil, water glycol and water-in-oil emulsion. When using phosphate ester, viton seals must be specified. Viton is compatible with all of the fluids mentioned.

**FILTRATION** -
A 10 micrometer return line filter is recommended for increased pump life. If a suction strainer is used, it should not be finer than 100 mesh (149 micrometer) when using petroleum fluids. The higher specific gravity of fire resistant fluids and the higher vapor pressure of the water containing fluids will aggravate the pump inlet conditions. If a suction strainer is used with these fluids, the mesh must be coarser (60 mesh or 238 micrometer) than what is used with petroleum oil or the surface area increased to reduce the pressure drop.

**OVERHUNG LOAD** -
Radial and axial forces on the shaft are not recommended. Pump and prime mover should be mounted with shafts inline (coaxial) and connected with a flexible coupling. Consult factory Applications Dept. for applications with overhung load.

**FLUID RECOMMENDATIONS** -
A premium quality hydraulic oil with zinc complex anti-wear additives is highly recommended. Refer to BOSCH REXROTH publication 9 535 233 456, “Petroleum Hydraulic Fluids Recommendations” for a list of fluids which meet or exceed the BOSCH REXROTH lubrication requirements.

**FILTRATION** -
A 10 micrometer return line filter is recommended for increased pump life. If a suction strainer is used, it should not be finer than 100 mesh (149 micrometer) when using petroleum fluids. The higher specific gravity of fire resistant fluids and the higher vapor pressure of the water containing fluids will aggravate the pump inlet conditions. If a suction strainer is used with these fluids, the mesh must be coarser (60 mesh or 238 micrometer) than what is used with petroleum oil or the surface area increased to reduce the pressure drop.

**OVERHUNG LOAD** -
Radial and axial forces on the shaft are not recommended. Pump and prime mover should be mounted with shafts inline (coaxial) and connected with a flexible coupling. Consult factory Applications Dept. for applications with overhung load.
MOUNTING POSITION - Pump should be mounted with the shaft horizontal. Caution must be exercised to prevent end thrust from being applied to the shaft.

SHAFT ALIGNMENT - Shaft alignment should be within 0.003" total indicator reading. If the shafts are not properly aligned, increased mechanical noise from the unit will result.

START-UP - To insure priming on initial start-up, air in the pump and inlet line must be allowed to escape. If the pump outlet is normally blocked, it must be temporarily vented. This can be accomplished by opening the valve, temporarily cracking a fitting, or installing an air bleed valve (refer to Bulletin J-34).

CONTROL OPTIONS - Many energy saving controls are available in addition to the standard two-stage pressure compensator. Refer to Bulletin A-11 for performance, and dimensional data.

COMBINATION MOUNTING - To simplify multi-pump circuits, adapter kits are available to mount additional pumps in combination on the rear cover of the flange mounted (side ported) pumps. Refer to Bulletin A-14 for horsepower limitations, adapters available, dimensional data, and How-To-Order.

WEIGHT (Approximate) -
Flange Mounted Pump ............... 105 lbs. (47.2 Kg)
Add for Screw Volume Control .......... 1 lbs. (0.5 Kg)

NOTE: All of the specifications for the standard pump also pertain to the TW INVANE pump except those listed below.

TWINVANE Pump

PRESSURE RATING -
TV-40 - 1000 psi (69 bar)

PRESSURE COMPENSATING RANGE -
TV-40 - 260-1000 psi (18-69 bar)

FLOW -
23 gpm (100 l/min) at 1200 rpm and 100 psi (7 bar)
28.5 gpm (110 l/min) at 1500 rpm and 100 psi (7 bar)

Because of the low viscosity of HWCF, the internal leakage is greater and will result in a slight reduction in flow in comparison to petroleum oil. Refer to the performance characteristics on page 5.

THEORETICAL DISPLACEMENT -
TV-40 - 4.4 in³/rev (72 ml/rev)

MAXIMUM INLET VACUUM AT SEA LEVEL -
When using high water content fluids, a positive head is beneficial but not necessary. The TV-40 can be used up to 12 inches (30 cm) above the fluid level at altitudes to 2000 feet (610 m) above sea level.

CASE DRAIN FLOW - The value listed below is the average flow which will occur when the pump is compensating at 1000 psi. When the pump is not compensating, the flow is much lower.
2.5 gpm (11.3 l/min) at 1200 rpm (HWCF)

DRIVE SPEED RANGE - 750-1500 rpm

ROTATION - Right hand only. Clockwise when viewing shaft end.

SEALS - Viton seals are standard.

SCREW VOLUME CONTROL - The screw volume control is standard.

FLUID RECOMMENDATIONS - If a high water content fluid is used, please consult the factory Applications Dept. during the fluid selection process for current list of approved fluids. This pump is not compatible with phosphate ester fluids.

Bolt kit B-113 is included to mount the pump to the foot bracket. Consists of 2 each 7/16-11 x 2 1/4 hex head cap screw and washer. The center height of the shaft of an electric motor can be determined by dividing the first two numbers of the motor frame by four.

### How to Order

**Foot Bracket**

Foot bracket and mounting bolts are not included with the pump and must be specified in addition to the pump.

**Example:** (1) PSV-PNCO-40HRM-62 Pump (1) PSV-40-10B Foot Bracket

### Flange Kits

Flanges are not included with the pump and must be specified in addition to the pump.

**Example:** (1) PSV-PNCO-40HRM-62 Pump (1) PSV-40-20F-60 Flange Kit
**Standard Pump**

### Control Options

- **P** - Standard Pressure Compensator
- **S** - Solenoid Two-Pressure (Normally Low, Energize for High Pressure)
- **H** - Solenoid Two-Pressure (Normally High, Energize for Low Pressure)
- **V** - Solenoid Two-Pressure (Normally Vented, Energize for High Pressure)
- **J** - Hydraulic Two-Pressure (Normally Low, Energize for High Pressure)
- **L** - Load Sensing
- **T** - Torque Limiting
- **K** - Single Stage Compensator

* Indicate the desired solenoid voltage and frequency at the end of the pump code.

### Mounting

- **C** - Flange, Side Ported (4-Bolt Flange Connections)
- **R** - Flange, Rear Ported (4-Bolt Flange Connections)

### Volume Control

- **N** - No Volume Control
- **S** - Screw Volume Control

### Seals

- **O** - Buna N (Not available)
- **F** - Viton

### Pressure Rating

- **H** - 2000 PSI

### Flow @ 1800 RPM

- 40 - 30 GPM @ 900 PSI

### Design Digit

- **66**

### Shaft

- **M** - Keyed Shaft Medium Length

### Rotation (viewing shaft end)

- **R** - Right Hand (Clockwise)
- **L** - Left Hand (Counterclockwise) (Left Hand not available)

### Solenoid Voltages Available
