Throttle check valve

Type Z2FS

Size 25
Component series 3X
Maximum operating pressure 350 bar [5076 psi]
Maximum flow 360 l/min [95 US gpm]

Features

- Sandwich plate valve
- Porting pattern to ISO 4401-08-08-0-05 and NFPA T3.5.1 R2-D08
- For limiting the flow of 2 actuator ports
- Adjustment element: Spindle with hexagon socket
- For meter-in or meter-out throttling

Information on available spare parts:

**Function, section**

Valves of type Z2FS are throttle check valves of sandwich plate design. They are used to limit the flow of one or two actuator ports.

Two throttle check valves, which are symmetrically arranged to each other, limit the flow (by means of adjustable throttle spools) in one direction and allow a free flow in the opposite direction.

In the case of meter-in throttling the hydraulic fluid is fed through channel A1 via throttling point (1) to actuator A2. Throttle spool (2.1) can be axially adjusted by means of spindle (3), thus allowing throttling point (1) to be adjusted.

At the same time, the hydraulic fluid present in channel A1 is fed via bore (4) to spool side (5). In addition to the spring force, the applied pressure holds throttle spool (2.1) in the throttling position.

The hydraulic fluid returning from actuator B2 shifts throttle spool (2.2) and thus provides an unhindered flow as with a check valve. Depending on the variant ("S" or "S2") throttling can be effective on the supply or return side.

**Flow limitation**

To change the velocity of an actuator, the throttle check valve can be installed between the directional valve and the sub-plate.

Meter-in throttling

① = component side
② = plate side
## Technical data (for applications outside these parameters, please consult us!)

### General

</tbody>
</table>

1) Suitable for NBR and FKM seals
2) Suitable for FKM seals only
3) The cleanliness classes specified for components must be adhered to in hydraulic systems. Effective filtration prevents malfunction and, at the same time, prolongs the service life of components.

For the selection of filters, see data sheets RE 50070, RE 50076, RE 50081, RE 50086, RE 50087 and RE 50088.
**Characteristic curves** (measured with HLP46, \(\theta_{\text{oil}} (\nu = 190 \text{ SUS}) = 40 ^{\circ} \text{C} \pm 5 ^{\circ} \text{C} \ [104 ^{\circ} \text{F} \pm 9 ^{\circ} \text{F}]\))

\[\Delta p-q \_V\] characteristic curves (via check valve, with closed throttle)

\[\Delta p-q \_V\] characteristic curves (constant throttling position)
Unit dimensions (dimensions in mm [inch])

1. Nameplate
2. Adjustment element “8”
   Spindle for adjusting the flow cross-section (hexagon socket 6 A/F)
   • Turning counter-clockwise = greater flow
   • Turning clockwise = smaller flow
3. Through-bores for valve mounting
4. Identical seal rings for ports A, B, P, T
5. Identical seal rings for ports X, Y, L
6. Locating pin (included in the scope of supply)
7. Hexagon 22 A/F, tightening torque \( M_t = 25 \text{ Nm} \) \( [18.4 \text{ ft-lbs}] \)
8. Porting pattern to ISO 4401-08-08-0-05 and NFPA T3.5.1 R2-D08
9.1 Plug screw for variant “B”
9.2 Plug screw for variant “A”

Valve mounting screws (separate order)
- Metric
  6 hexagon socket head cap screws
  ISO 4762 - M12 - 10.9-flZn-240h-L
- UNC
  6 hexagon socket head cap screws 5/8-11 UNC

Note!
The length and tightening torque of valve mounting screws must be calculated taking account of the components mounted above and below the sandwich plate valve.
